Hints if you're struggling in your science class:

- 1) Ask **content specific** questions during class.
- 2) Take good notes – write down everything your teacher writes on the board.
- 3) Do **all** your homework, labs and assignments.
- 4) Form a Study Group with other students in your science course – they don't have to be in your same period.
- 5) Study at least 30-40 minutes each and every day **not** just before the test.
- 6) See your teacher before or after school for extra help and/or other science teachers outside of class for extra help (NOT the day before a test or the day of the test).
- 7) Take advantage of online resources for your book.

If **all the above isn't enough, consider hiring a science tutor to address specific weaknesses.*
